# COLIBRÌ ECO COVERS

COLIBRÌ ECO COVERS are the  
first and only covers that contain  
I'M GREEN™ POLYETHYLENE

Polyethylene is normally produced from fossil raw material, such as oil or natural gas. **I'm Green™ Polyethylene is a plastic material made from a renewable vegetable raw material: ethanol, which is extracted from sugar cane.**

I'm Green™ Polyethylene guarantees the same characteristics of petrochemical polyethylene in terms of applications, functionality and recyclability, but with a significantly better impact on the environment.

The production of 1kg of regular polyethylene ADDS to the atmosphere approximately 6kg of CO<sub>2</sub>

The production of 1kg of I'm green™ polyethylene ELIMINATES from the atmosphere more than 3kg of CO<sub>2</sub>

We have been a happy customer for nearly 10 years! Colibri has helped me stay on budget with their tough, time-saving book covers. Any public library, not already using Colibri, needs to talk to their rep TODAY!

The CoLibri book covering machine is honestly the best thing to come out of Italy since the invention of pizza. Covering books went from slow and tedious to quick and easy. 😊
